

Mezzanine floors designed, manufactured and installed exclusively for the trade.

- Sturdy construction
- Designed to all the relevant standards and codes of practise
- Building regulations applications made on your behalf
- Available in a range of colour options
- Installed by highly experienced mezzanine fitters
- 38mm heavy duty particle board decking

One of our team of highly skilled and experienced engineers will carry out a full site survey and produce accurate working drawings and structural calculations using industry standard software.

Approved inspectors are used to give a fast turnaround on application approvals.

Once drawings are approved, manufacturing will commence. When materials are ready and an installation date is agreed, fitters arrive on site with the delivery vehicle, unload and installation commences.

Our installations vary greatly in size and complexity, from small storage areas in a starter unit (above) to a fully functional production area and packaging installation (see right).

Each project is designed to the customers complete satisfaction.
